<b>C. OTHER INFORMATION TO THE CONSOLIDATED QUARTERLY REPORT .....</b>	<b>31</b>
1. Discussion of key financial and economic data contained in the interim financial statements, in particular factors and events, including non-recurring ones, with a material effect on the issuer's operations and profits earned or losses incurred in the financial year; discussion of development prospects in a period covering at least the next financial year .....	32
2. Brief description of significant achievements or failures in the reporting period, including identification of key events .....	34
3. Management Board's position on the feasibility of meeting any previously published forecasts for a given year in light of the results presented in the quarterly report .....	37
4. Factors and events, especially of non-recurring nature, with a material bearing on financial performance .....	37
5. Shareholders holding, directly or indirectly through subsidiaries, 5% or more of total voting rights at the General Meeting of the issuer as at the date of issue of the quarterly report, including information on the number of shares held by those shareholders, their interests in the share capital, the resulting number of votes at the General Meeting and their share in total voting rights at the General Meeting, and any changes in the ownership structure of major holdings of the issuer shares after the issue of the previous quarterly report .....	37
6. Effects of changes in the Group's structure, including changes resulting from mergers, acquisitions or disposals of Group entities, long-term investments, demergers, restructuring or discontinuation of operations .....	37
7. General information .....	37
8. Composition of the Parent's Management and Supervisory Boards .....	38
9. Legal environment .....	39
9.1 Introduction .....	39
9.2 Key regulations applicable to the energy sector .....	40
9.3 Ownership of infrastructure for transmission or distribution of electricity .....	46
9.4 Transmission easement .....	46
9.5 Environmental protection .....	47
9.6 Act on Wind Farm Projects .....	51
<b>D. QUARTERLY FINANCIAL INFORMATION OF POLENERGIA S.A. ....</b>	<b>53</b>

**A. INTRODUCTION TO THE CONSOLIDATED QUARTERLY REPORT**

## 1. Combined statement of profit or loss for the first quarter ended March 31st 2017

Presented below is the combined statement of profit or loss for Q1 2017.

In Q1 2017, the Polenergia Group generated an adjusted (normalised) EBITDA of PLN 42.5m and net profit of PLN 2.9m, down by PLN 44.6m (-51%) and PLN 35.7m (-92%), respectively, on the corresponding period of the previous year.

Polenergia Group's performance (PLNm)		3M 2017	3M 2016	Change y/y	Change y/y [%]
<b>Revenue</b>		<b>709.9</b>	<b>722.5</b>	<b>(12.6)</b>	<b>-2%</b>
Cost of sales		(684.4)	(653.6)	(30.8)	5%
including operating expenses		(106.0)	(110.2)	4.2	-4%
<b>Gross profit</b>		<b>25.5</b>	<b>68.9</b>	<b>(43.4)</b>	<b>-63%</b>
Distribution costs and administrative expenses		(8.2)	(9.0)	0.7	-8%
Other income/(expenses)		1.4	1.1	0.2	20%
<b>A Operating profit (EBIT)</b>		<b>18.7</b>	<b>61.1</b>	<b>(42.4)</b>	<b>-69%</b>
Depreciation and amortisation		24.5	26.7	(2.2)	-8%
<b>EBITDA</b>		<b>43.2</b>	<b>87.8</b>	<b>(44.6)</b>	<b>-51%</b>
Elimination of purchase price allocation effect		(0.7)	(0.7)	—	0%
<b>Adjusted EBITDA*</b>		<b>42.5</b>	<b>87.1</b>	<b>(44.6)</b>	<b>-51%</b>
<b>B Finance income</b>		<b>3.4</b>	<b>1.2</b>	<b>2.2</b>	<b>187%</b>
<b>C Finance costs</b>		<b>(16.8)</b>	<b>(14.4)</b>	<b>(2.5)</b>	<b>17%</b>
<b>A+B+C Profit/(loss) before tax</b>		<b>5.2</b>	<b>47.9</b>	<b>(42.7)</b>	<b>-89%</b>
Income tax		(3.6)	(11.5)	7.8	-68%
<b>Net profit/(loss)</b>		<b>1.6</b>	<b>36.4</b>	<b>(34.8)</b>	<b>-96%</b>
Elimination of purchase price allocation effect		1.5	1.5	—	
Elimination of unrealised exchange differences effect		(0.8)	0.2	(1.1)	
Elimination of the effect of loan valuation using AMC method		0.7	0.4	0.2	
<b>Adjusted net profit*</b>		<b>2.9</b>	<b>38.6</b>	<b>(35.7)</b>	
<b>Adjusted EBITDA margin</b>		<b>6.0%</b>	<b>12.1%</b>		
Trading segment revenue		572.6	538.2	34.4	
Trading segment costs of sale		(569.6)	(529.2)	(40.3)	
<b>Adjusted EBITDA (excluding trading segment)</b>		<b>41.7</b>	<b>80.5</b>	<b>(38.8)</b>	
<b>Adjusted EBITDA margin (excluding trading segment)</b>		<b>30.4%</b>	<b>43.7%</b>		

\*) Adjusted for non-cash/one-off income (expenses) recognised in the financial year.

The revenue decline due to lower prices of green certificates and worse wind conditions in the wind power segment, as well as lower forecasts of electricity, gas and CO<sub>2</sub> prices in the conventional energy segment, were partly offset by higher wholesale volumes and development of the gas trading segment.

For a description of differences in operating expenses, distribution costs and administrative expenses, see Note 3.2. These largely reflected the effects of the savings programme, which led to a reduction in the costs of salaries, wages and social security contributions (by an aggregate of PLN 9.1m in the entire year 2016, and by another PLN 2.0m in 2017).

A noteworthy development was the PLN 2.4m improvement in unallocated Group management costs, on the back of the implemented optimisation programme, which generated savings on the costs of salaries and wages (for the consolidated effect, see Note 3.2, and for the effect on a separate basis – see the note on p. 60), and recognition of a provision for costs in Q1 2016, which increased costs in that period.

The wind power segment saw its EBITDA drop by PLN 21.9m, primarily as a result of a decline in the prices of green certificates, worse wind conditions, and higher expenses on property tax, though partly offset by a reduction of operating expenses following the renegotiation of a turbine maintenance contract at two wind farms. Further reductions are expected at other wind farms in the following quarters.

Operating profit of the conventional energy segment was lower by PLN 14.3m year on year, which was mostly attributable to lower operating profit generated by ENS (the Nowa Sarzyna CHP Plant), following recognition in Q1 2016 of the changed allocation of stranded costs compensation income following a revision of the forecast prices of electricity, coal, CO<sub>2</sub> and gas (as a result of which operating profit for Q1 2016 was relatively higher from that for the current reporting period).

The distribution segment's YTD performance was lower by PLN 2.9m year on year, mostly as a result of reversal of provisions for settlements with a trading partner in Q1 2016 (a non-recurring item), which increased the previous year's base.

The trading segment's YTD EBITDA was PLN 5.9m lower year on year, mainly due to the decline in the prices of green certificates negatively affecting the return on the certificates portfolio. This negative effect was only partially offset by improved performance in the gas and electricity trading business and in the new CO<sub>2</sub> trading segment.

The biomass segment's EBITDA in Q1 2017 was PLN 2.2m lower compared with a year earlier, mainly due to lower sales volumes and selling prices.

As a result of these developments, the adjusted EBITDA margin for Q1 2017 reached 6.0%, and was lower year on year mainly due to the drop in the prices of certificates which had a negative effect on the trading and wind power segments' performance.

Adjusted EBITDA margin excluding trading operations (which are characterised by relatively low unit margins and very high transaction volumes) fell in the reporting period by more than 13pp, to 30.4%.

Lower net finance income was attributable to increased interest expense following the launch of new projects, partly offset by higher interest income and a positive effect of foreign exchange differences.

Given that adjusted EBITDA for the last 12 months (from April 1st 2016 to March 31st 2017) was PLN 183.4m, and the Group's net debt as at March 31st 2017 amounted to PLN 736.8m, the net debt/EBITDA ratio stood at 4.02x.

Concurrently with day-to-day operations, work was continued on the development of new projects. In particular, environmental permits were received for the developed projects from the Regional Director for Environmental Protection in Gdańsk, one for Bałtyk Środkowy III issued in July 2016 and one for Bałtyk Środkowy II issued in April 2017. In addition, a cooperation agreement was signed with Convergent Power concerning energy storage systems.

Also, onshore wind farm projects and a biomass project were being prepared for participation in the auction-based system.

Breakdown of the Group's combined performance for Q1 2017 by business segment is presented on the following pages.

3M 2017 (PLNm)	Wind power	Conventional energy	Trading	Distribution	Biomass	Development	Unallocated Group management costs	Purchase price allocation	TOTAL

## **1. Policies applied in the preparation of the interim condensed consolidated financial statements**

### **1.1 Duration of the Company and other Group companies**

The Company and all of its related entities have been established for an indefinite period.

### **1.2 Periods covered by the interim condensed consolidated financial statements**

These interim condensed consolidated financial statements cover the three months ended March 31st 2017 and contain comparative data for the three months ended March 31st 2016 and as at December 31st 2016. The statement of profit or loss and the notes to the statement of profit or loss cover the three months ended March 31st 2017, as well as comparative data for the three months ended March 31st 2016.

These interim condensed consolidated financial statements have been prepared on the assumption that the Company and the Group will continue as going concerns in the foreseeable future, that is for at least 12 months after the reporting period, i.e. March 31st 2017.

### **1.3 Authorisation of the financial statements**

These interim condensed consolidated financial statements were authorised for issue by the parent's Management Board on May 11th 2017.

### **1.4 Policies applied in the preparation of the financial statements**

These interim condensed consolidated financial statements have been prepared in accordance with International Accounting Standard 34 and cover the three months from January 1st to March 31st 2017, a comparative period from January 1st to March 31st 2016, as well as data as at December 31st 2016, presented in the statement of financial position. These interim condensed financial statements for the three months ended March 31st 2017 have not been reviewed by an independent auditor, whereas the comparative data for the financial year ended December 31st 2016 have been audited.

These interim condensed consolidated financial statements have been prepared in compliance with the historical cost convention, except for the following material items in the statement of financial position:

- financial derivatives, measured at fair value,

The International Financial Reporting Standards comprise standards and interpretations approved by the International Accounting Standards Board ("IASB") and the International Financial Reporting Interpretations Committee ("IFRIC").

Some of the Group companies keep their accounts in accordance with the accounting policies defined in the Polish Accountancy Act of September 29th 1994, as amended (the "Act"), and secondary legislation issued thereunder (the "Polish Accounting Standards"). In these interim condensed consolidated financial statements certain adjustments have been made to bring the financial statements of these companies into conformity with the IFRSs, which are not disclosed in their books of account.

These interim condensed consolidated financial statements do not include all the information and disclosures required in the case of full-year consolidated financial statements and should be read in conjunction with the consolidated financial statements of the Group for the year ended December 31st 2016.

These interim condensed consolidated financial statements have been prepared using the same accounting policies and calculation methods as those applied in the most recent full-year financial statements, for the year ended December 31st 2016.

A number of new Standards, amendments to Standards and Interpretations were not yet effective for the annual periods ended December 31st 2016 and, consequently, they have not been applied in preparing these interim condensed consolidated financial statements. None of the new Standards, amendments to Standards, and Interpretations will have a material effect on the Group's financial statements.

## 2. Operating segments

For management purposes, the Group performed an analysis to identify operating segments, as a result of which it identified the following operating segments, corresponding to the reportable segments:

- conventional energy segment comprising the generation of electricity and heat,
- development and implementation segment comprising the development and construction of wind farms and a conventional power plant,
- wind power segment comprising the generation of electricity,
- biomass segment responsible for the production of pellets from energy crops,
- distribution segment comprising the distribution and sale of electricity to commercial, industrial and household customers,
- electricity and certificates of origin trading segment.

The Management Board monitors the respective segments' operating performance to make decisions on the allocation of resources, and evaluate the results of the allocation and the segments' operating performance. The basis for the evaluation is operating profit or loss before depreciation/amortisation, which is to a certain extent measured differently than the operating profit or loss in the consolidated financial statements, as indicated in the table below. Income tax is monitored at the Group level and is not allocated to the operating segments. Unallocated assets comprise the Company's cash.

Prices used in transactions between the operating segments are determined on arm's length basis, as in the case of transactions with unrelated parties. All consolidation adjustments are allocated to the relevant segments.

Izba Rozliczeniowa Gield Towarowych S.A. (the Warsaw Commodity Clearing House) is the only customer whose transactions with the Group have reached or exceeded 10% of the Group's total revenue. 99.9% of the segments' assets are located in Poland.

<b>Total finance costs</b>	<b>16,831</b>	<b>14,362</b>

\*) Related to bank borrowings measured at amortised cost.

### 3.7 Cash flows

Restricted cash	For the three months ended	
	Mar 31 2017	Mar 31 2016
- cash for credit facility repayments	33,387	32,102
- cash for the settlement of compensation for stranded costs	64,409	77,841
- cash for long- and medium-term overhauls	3,461	4,231
- other restricted cash	100	3,562
<b>Total</b>	<b>101,357</b>	<b>117,736</b>

#### Explanation of differences between changes in certain items in the statement of financial position and changes in the statement of cash flows

Inventories:	For the three months ended	
	Mar 31 2017	Mar 31 2016
- change in inventories in the statement of financial position	5,690	(9,412)
- recognition of inventories under non-current assets	645	-
<b>Change in inventories in the statement of cash flows</b>	<b>6,335</b>	<b>(9,412)</b>

Receivables:	For the three months ended	
	Mar 31 2017	Mar 31 2016
- change in short-term and long-term receivables, net in the statement of financial position	39,544	69,205
- change in financial receivables	36,085	552
<b>Change in receivables in the statement of cash flows</b>	<b>75,629</b>	<b>69,757</b>

Liabilities:	For the three months ended	
	Mar 31 2017	Mar 31 2016
- change in liabilities, net of borrowings, in the statement of financial position	(96,322)	(63,469)
- change in finance lease liabilities	156	290
- change due to dividends payable	-	(22,722)
- change in investment commitments	(2,723)	10,045
- change in financial liabilities	990	(337)
<b>Change in liabilities in the statement of cash flows</b>	<b>(97,899)</b>	<b>(76,193)</b>

Accruals and deferrals:	For the three months ended	
	Mar 31 2017	Mar 31 2016
- change in accruals and deferrals in the statement of financial position	(10,199)	5,919
- commissions on bank borrowings	(461)	(4,668)
- property, plant and equipment under construction, not invoiced	-	(10,382)
<b>Change in accruals and deferrals in the statement of cash flows</b>	<b>(10,660)</b>	<b>(9,131)</b>

### 3.8 Goodwill

Goodwill related to subordinated entities, recognised as a result of the contribution of the Neutron Group assets to the Group, is attributable to the difference between the purchase price and the fair value of net assets acquired.

Goodwill following from the above-mentioned transaction amounted to PLN 184m and was attributable to the following cash-generating units (segments):

- (i) PLN 75m – development segment – comprising Polenergia Bałtyk I, Polenergia Bałtyk II and Polenergia Bałtyk III;
- (ii) PLN 40m – conventional energy segment – comprising Polenergia Elektrociepłownia Nowa Sarzyna;
- (iii) PLN 25m – distribution segment – comprising Polenergia Dystrybucja and Polenergia Kogeneracja;
- (iv) PLN 44m – trading segment – comprising Polenergia Obrót.

### 4. Notes explaining seasonal or cyclic nature of the issuer's operations in the reporting period

The Polenergia Group operates in the following market segments:

- Conventional energy,
- Development of building projects and project implementation,
- Biomass,
- Wind power,
- Distribution,
- Energy trading and sale.

Of these, conventional energy and wind power generation are seasonal by nature.

The Polenergia Group's key customers use the heat and electricity supplied by the Group mainly for production purposes at their industrial facilities, and this business is not subject to seasonal fluctuations. However, a small proportion of heat delivered by the Group is used for heating purposes, both by industrial and municipal customers. Those delivery patterns are seasonal, with higher consumption of heat in the first and the fourth quarters of the financial year. However, this seasonality does not have a material effect on the Group's financial performance.

Moreover, the wind conditions, which determine the output of wind farms, are uneven during the year: in autumn and winter they are significantly better than in spring and summer. The wind farm sites were selected by the issuer based on professional wind measurements confirmed by independent and reputable experts. That said, there can be no assurance that the actual wind conditions will not be different than those used in the Group's models for specific investment projects.

### 5. Interest-bearing borrowings

During the three months ended March 31st 2017, there were no material events related to interest-bearing borrowings.

**6. Changes in accounting estimates**

## a) Effective tax rate

	For the three months ended	
	Mar 31 2017	Mar 31 2016
<b>Tax expense recognised in profit or loss, including:</b>	<b>3,639</b>	<b>11,456</b>
Current income tax	283	2,930
Deferred tax	3,356	8,526
<b>Profit before tax</b>	<b>5,222</b>	<b>47,883</b>
Tax expense at the effective rate of 19% (2016: 19%)	992	9,098
Adjustments to current income tax from previous years	(4)	-
<b>Non-tax-deductible costs:</b>	<b>2,705</b>	<b>2,269</b>
- permanent differences	61	405
- tax assets on account of tax losses in Special Economic Zone	247	(156)
- tax asset on account of other tax losses	2,397	2,020
<b>Non-taxable income:</b>	<b>(54)</b>	<b>89</b>
- other	(54)	89
<b>Tax recognised in profit or loss</b>	<b>3,639</b>	<b>11,456</b>

## b) Change in provisions

Change in short- and long-term provisions

	Mar 31 2017	Dec 31 2016
<b>Provisions at beginning of period</b>	<b>28,572</b>	<b>6,423</b>
- provisions recognised	76	24,660
- provisions reversed	(686)	(2,511)
<b>Provisions at end of period</b>	<b>27,962</b>	<b>28,572</b>

## c) Trade and other receivables

In the period ended March 31st 2017, impairment losses on unrecoverable trade receivables went up to PLN 2,287 thousand.

	Mar 31 2017	Dec 31 2016
<b>At beginning of period</b>	<b>2,281</b>	<b>7,779</b>
- Increase	16	382
- Use	(2)	(173)
- Reversal	(8)	(5 707)
<b>At end of period</b>	<b>2,287</b>	<b>2,281</b>

Below is an analysis of trade receivables that were past due as at March 31st 2017, but in respect of which no impairment losses were recognised.

	Total	Not past due	Past due but recoverable				Over 120 days
			Less than 30 days	30-60 days	60-90 days	90-120 days	
Mar 31 2017	107,099	99,748	6,224	305	87	82	653
Dec 31 2016	149,494	145,445	2,637	251	88	68	1,005

Receivables past due more than 120 days relate mainly to the distribution business, which is characterised by a large number of customers and in the case of which impairment losses are recognised as follows:

- Receivables past due from 181 to 270 days – 25%
- Receivables past due from 271 to 365 days – 50%
- Receivables past due more than 365 days – 100%

Receivables which have been cancelled, have become time-barred or unrecoverable, for which no impairment losses have been recognised (or where recognised impairment losses do not cover the full amount receivable), are posted to other expenses or finance costs, as appropriate.

## d) Valuation of contracts on purchase and sale of electricity and green certificates

Forward contracts as derivative instruments are measured at fair value, with changes in fair value recognised in profit or loss. Valuation was performed with respect to the outstanding part of the contracts, with a breakdown into current and non-current portion.

**7. Issue, redemption and repayment of debt and equity securities**

The Group does not issue any debt securities. As at the date of this report, the parent did not issue any debt securities in the first quarter ended March 31st 2017.

**8. Dividend paid or declared- aggregate and per share amounts, separately for ordinary and preference shares**

No dividend was paid in the period of three months ended March 31st 2017.

## **9. Changes in contingent liabilities or contingent assets subsequent to the end of the previous financial year**

In the first quarter of 2017, the total amount of contract sureties provided by Kulczyk Investments to Polenergia Obrót S.A. fell to EUR 7,682 thousand as at March 31st 2017.

## **10. Proceedings pending before common courts of law, arbitration courts or public administration authorities**

### **Information on proceedings relating to liabilities or receivables of the issuer or its subsidiary with a value representing 10% or more of the issuer's equity, specifying the subject matter of the proceedings and the issuer's position**

Amon Sp. z o.o. is a party to proceedings instigated by Amon Sp. z o.o. to determine the ineffectiveness of termination by Polska Energia – Polska Kompania Handlowa Sp. z o.o. (the defendant) of contracts between Polska Energia – Polska Kompania Handlowa Sp. z o.o. and Amon Sp. z o.o. concerning the sale by Amon Sp. z o.o. to Polska Energia – Polska Kompania Handlowa Sp. z o.o. of (i) electricity generated by the Łukaszów Wind Farm, and (ii) the property rights incorporated in the certificates of origin for electricity confirming generation of renewable energy by the Łukaszów Wind Farm. The litigation value has been determined as the contracts' value until the end of their original term (i.e. until 2027), and amounts to PLN 381,671 thousand. In the Company's opinion, the claim is well-founded and should be granted by the Court.

In addition, Amon Sp. z o.o. has been served with a call for a conciliation hearing based on a petition submitted by Polska Energia – Polska Kompania Handlowa Sp. z o.o. (petitioner). The call for a conciliation hearing relates to the petitioner's claim for payment of an amount of PLN 19,331 thousand. In the petition, the petitioner refers to its termination of the aforesaid contract for sale of electricity and property rights, which in the petitioner's opinion entitles the petitioner to seek contractual penalties from Amon Sp. z o.o. Amon Sp. z o.o. questions the effectiveness of termination of the contract by Polska Energia – Polska Kompania Handlowa Sp. z o.o. as part of the proceedings described above. Therefore, the Company fully rejects the claim to which the call for conciliation refers as invalid.

Talia Sp. z o.o. is a party to proceedings instigated by Talia Sp. z o.o. to determine the ineffectiveness of termination by Polska Energia – Polska Kompania Handlowa Sp. z o.o. (the defendant) of contracts between Polska Energia – Polska Kompania Handlowa Sp. z o.o. and Talia Sp. z o.o. concerning the sale by Talia Sp. z o.o. to Polska Energia – Polska Kompania Handlowa Sp. z o.o. of (i) electricity generated by the Modlikowice Wind Farm, and (ii) the property rights incorporated in the certificates of origin for electricity confirming generation of renewable energy by the Modlikowice Wind Farm. The litigation value has been determined as the contracts' value until the end of their original term (i.e. until 2027), and amounts to PLN 253,097 thousand. In the Company's opinion, the claim is well-founded and should be granted by the Court.

In addition, Talia Sp. z o.o. has been served with a call for a conciliation hearing based on a petition submitted by Polska Energia – Polska Kompania Handlowa Sp. z o.o. (petitioner). The call for a conciliation hearing relates to the petitioner's claim for payment of an amount of approximately PLN 12,846 thousand. In the petition, the petitioner refers to its termination of the aforesaid contract for sale of electricity and property rights, which in the petitioner's opinion entitles the petitioner to seek contractual penalties from Talia Sp. z o.o. Talia Sp. z o.o. questions the effectiveness of termination of the contract by Polska Energia – Polska Kompania Handlowa Sp. z o.o. as part of the proceedings described above. Therefore, the Company fully rejects the claim to which the call for conciliation refers as invalid.

**Information on two or more proceedings relating to liabilities or receivables with a total value of 10% or more of the issuer's equity, specifying the total value of all proceedings involving receivables and all proceedings involving liabilities, together with the issuer's position and – for the proceedings relating to liabilities and receivables of the highest value – their subject matter, value, date of commencement, and parties to the proceedings**

There were no proceedings relating to liabilities or receivables with a total value equal to at least 10% of the Company's equity.

### **Other proceedings**

The Company's subsidiary, Grupa PEP – Biomasa Energetyczna Północ Sp. z o.o. is seeking a total of PLN 40 thousand from its trading partners, as a refund of advance payments. The proceedings are pending.

Due to the nature of its business which involves supplying electricity to end consumers, the Company's subsidiary Polenergia Dystrybucja Sp. z o.o. is enforcing claims against a number of customers in relation to sale and distribution of electricity, for a total amount of approximately PLN 400 thousand. Polenergia Dystrybucja Sp. z o.o. is also seeking payment of approximately PLN 550 thousand from its trading partner in connection with settlements for electricity delivered to Polenergia Dystrybucja Sp. z o.o. for resale.

The Company's subsidiary Polenergia Obrót S.A. has secured an enforceable title against one customer for the amount of PLN 5,000 thousand, with respect to which enforcement proceedings are pending.

Moreover, the Company's subsidiary Polenergia Elektrownia Północ Sp. z o.o. is in dispute with the other party to a preliminary property sale agreement, seeking to oblige that party to execute the final sale agreement. Polenergia Elektrownia Północ Sp. z o.o. also initiated proceedings against the same person for payment of a penalty for breach of contract. The amount in dispute is PLN 100 thousand.

Eolos Polska Sp. z o.o. filed for joint and several payment by the Company's subsidiaries, Certyfikaty Sp. z o.o. and Polenergia Obrót S.A., of contractual penalties and amounts due totalling PLN 20.2m under alleged breach of contracts which expired on January 5th 2016. It should be noted that in the statement of claim the plaintiff indicated that its claim could be higher due to the fact that the claimed contractual penalties would increase in subsequent years. Accordingly, in March 2017 Eolos Polska Sp. z o.o. sent a payment notice to Certyfikaty Sp. z o.o. and Polenergia Obrót S.A., raising an additional claim for payment of PLN 7,672 thousand. The subsidiaries denied the claim in its entirety, as well as the grounds for the payment notice; as a consequence, on May 4th 2017 the subsidiaries were sent a letter extending the claim to include the aforesaid amount. Moreover, Polenergia Obrót S.A. maintains that the allegation of Polenergia Obrót's joint responsibility for Certyfikaty Sp. z o.o.'s liabilities is groundless.

The Złotoryja County Head issued two decisions for Amon Sp. z o.o. and one decision for Talia Sp. z o.o. allowing them to exclude arable land which is to accommodate wind farms and access roads from agricultural production. The decisions also determined the amounts due for the exclusion of the arable land from agricultural production, totalling PLN 1,705 thousand to be paid by Amon Sp. z o.o. and PLN 831 thousand to be paid by Talia Sp. z o.o. The decisions became final, however both Amon Sp. z o.o. and Talia Sp. z o.o. filed petitions for declaration of invalidity of the decisions along with requests to stay their enforcement with the Local Government Board of Appeals of Legnica. The petitions for declaration of invalidity of the decisions were based on a number of procedural errors made by the Złotoryja County Head in the course of the administrative proceedings, which may testify to a gross violation of law by the County Head. A declaration of invalidity of the decisions would result in a lack of grounds for charging the amounts assessed for exclusion of the arable land from agricultural production, and the necessity for reconsideration of the case based on its merits. Dismissal of the petitions for declaration of invalidity would result in such dismissal being subject to revision by the administrative court, but that would not stay enforcement of the decisions. The requests to stay enforcement of the decisions were granted by the Local Government Board of Appeals.

For more information on the administrative and administrative court proceedings related to private letter rulings on tax issues obtained by companies operating the wind farms, see Section 9.6 in Part C (Other information to the consolidated quarterly report).

## 11. Significant related-party transactions

As at March 31st 2017, the Group did not have any associates involved in material related-party transactions.

In the three months ended March 31st 2017, the following material related-party transactions took place:

Mar 31 2017	Revenue	Costs	Receivables	Liabilities
Kulczyk Investments	-	296	-	40
Kulczyk Holding	-	152	-	-
Krucza Inwestycje KREH 1 Sp. z o.o. S.K.	32	650	70	-
Chmielna Inwestycje KREH2 Sp. z o.o. S.K.A.	296	-	118	-
Polenergia Holding Sarl	80	-	88	-
Polenergia Biogaz Sp. z o.o.	31	-	235	-
Polskie Biogazownie S.A.	10	-	107	-
Polskie Biogazownie Energy Zalesie Sp. z o.o.	1	448	32	-
Ciech Sarzyna S.A.	6,090	522	1,593	213
Autostrada Eksploatacja S.A.	620	-	241	-
Polenergia International Sarl	304	-	305	-
Polenergia Usługi Sp. z o.o.	29	-	32	-
<b>Total</b>	<b>7,493</b>	<b>2,068</b>	<b>2,821</b>	<b>253</b>

## 12. Loan sureties or guarantees issued by the issuer or its subsidiary where the aggregate value of such outstanding sureties and guarantees issued to a single entity or its subsidiary represents 10% or more of the issuer's equity

As at March 31st 2017, the Group did not issue any external guarantees.

## 13. Other information the issuer considered material to the assessment of its human resources, assets, financial condition and financial performance, and changes in any of the foregoing, as well as information material to the assessment of the issuer's ability to fulfil its obligations

In the Company's opinion, there is no information material to the assessment of its ability to fulfil its obligations other than the information presented in this report.

## 14. Factors which in the issuer's opinion will affect its performance over at least the next quarter

In the Company's opinion, the following factors will materially affect its performance (consolidated and separate) in the coming quarters:

- macroeconomic situation in Poland,
- the final shape of the legislation applicable to the Company's business, discussed in detail under 'Legal environment',
- prices of electricity and green and yellow certificates,
- wind conditions in the areas where the Puck, Łukaszów, Modlikowice, Rajgród, Gawłowice, Skurpie and Mycielin Wind Farms are located,
- changes in the prices of natural gas and biomass and their availability,
- financial condition of the Company's customers,
- ability to obtain financing for the planned projects,
- EUR/PLN exchange rate and WIBOR/EURIBOR interest rates.

## 15. Objectives and policies of financial risk management

Apart from derivatives, the key financial instruments used by the Group include credit facilities, cash, and short-term deposits, the primary purpose of which is to secure financial resources to finance the Group's operations. The Group also holds other financial instruments, such as trade payables and receivables arising in connection with its activities.

The Group enters into transactions involving derivative instruments, primarily forward contracts to hedge its currency and market price risks. The purpose of these transactions is to manage the currency risk and the risk of market prices (in particular in electricity trading) which arise in the course of the Group's operations and in connection with the sources of funding it uses.

The key risks connected with the Group's financial instruments are: interest rate risk, liquidity risk, currency risk, and credit risk. The Management Board verifies and establishes rules for managing each of these types of risk; the rules are briefly discussed below. The Group also monitors the risk of market prices with respect to the financial instruments it holds.

### 15.1 Interest rate risk

The Group's exposure to the risk of changes in market interest rates relates primarily to its non-current financial liabilities.

It is the Group's policy to manage its interest expense by using debt financing based on floating rates. To hedge interest payments under its borrowings, the Group uses financial derivatives.

The table below presents sensitivity of the Company's full-year profit before tax (in connection with floating-rate liabilities) to reasonably possible movements in interest rates, all other factors being equal. The effect on the Group's equity is not presented.

<b>period ended Mar 31 2017</b>	<b>Increase/decrease (percentage points)</b>	<b>Effect on pre-tax profit/loss over three consecutive months (PLN '000)</b>
1M WIBOR	1%	(2,191)
1M EURIBOR	1%	(70)
1M WIBOR	-1%	2,191
1M EURIBOR	-1%	70

<b>period ended Mar 31 2016</b>	<b>Increase/decrease (percentage points)</b>	<b>Effect on pre-tax profit/loss over three consecutive months (PLN '000)</b>
1M WIBOR	1%	(2,263)
1M EURIBOR	1%	(86)
1M WIBOR	-1%	2,263
1M EURIBOR	-1%	86

### 15.2 Currency risk

The Group's currency risk involves primarily the risk of changes in the euro exchange rate with respect to its short currency position under bank deposits, investment commitments, and investment credit facilities. As at March 31st 2017, the position was valued at EUR 6.7m. It is not hedged against changes in currency exchange rates.

Except in the case of the above unhedged currency position, when negotiating the terms of hedging derivatives, the Group seeks to match them with the terms of the hedged item, thus ensuring the maximum effectiveness of hedging.

The table below presents the sensitivity of the Group's profit/loss before tax (due to changes in the fair value of monetary assets and liabilities) to reasonably possible movements in the euro exchange rate, all other factors being equal.

	<b>Exchange rate increase/decrease</b>	<b>Effect on profit/loss</b>
Mar 31 2017 - EUR	+ PLN 0.01/EUR	(67)
	- PLN 0.01/EUR	67
Mar 31 2016 - EUR	+ PLN 0.01/EUR	(81)
	- PLN 0.01/EUR	81

In the period ended March 31st 2017, the Group realised finance income of PLN 1,005 thousand from unrealised exchange differences.

In the period from March 31st 2017 to June 30th 2017, movements in the PLN/EUR exchange rate may affect the amount of unrealised exchange differences. The result on unrealised exchange differences as at June 30th 2017 will mainly depend on the difference between the PLN/EUR exchange rates on June 30th 2017 and March 31st 2017, with the appreciation/depreciation of the Polish zloty against the euro having a positive/negative effect on the net profit of ca. PLN 67 thousand for each PLN 0.01 of the difference relative to the exchange rate as at March 31st 2017 (PLN 4.2684 /EUR).

### 15.3 Credit risk

The Group executes transactions only with reputable companies enjoying sound credit standing. Each customer who wishes to trade on credit terms is subject to credit verification procedures. Moreover, thanks to ongoing monitoring of receivable balances, the Group's exposure to the risk of unrecoverable receivables is insignificant.

With respect to the Group's other financial assets, such as cash and cash equivalents, financial assets available for sale and certain derivative instruments, credit risk is related to the counterparty's inability to pay, and the maximum exposure to this risk is equal to the carrying amount of such instruments.

As the Group's investment projects rely to a large extent on external financing, there is significant debt concentration at the Group. The contracted credit facilities provide for a number of financial covenants which have to be met by individual projects.

Given the current market environment, possible consequences of the Act on Wind Farm Projects and situation prevailing on the market of green certificates, there is a risk that the Group may default on the covenants with respect to certain project.

The Group monitors the debt levels and compliance with covenants at individual companies, remaining in contact with the financing institutions.

Cash at banks is held with well-rated banks. There is no concentration of credit risk, because the Group deals with several reputable banks.

Trade receivables are owed mainly by customers having good credit ratings with whom the Group maintains continued business relations.

## 15.4 Liquidity risk

The table below presents the Group's financial liabilities by maturity as at March 31st 2017 and December 31st 2016, based on undiscounted contractual payments.

Mar 31 2017	up to 3 months	from 3 to 12 months	from 1 year to 5 years	over 5 years	Total
Interest-bearing borrowings	54,128	354,808	440,775	581,980	1,431,691
Other liabilities	168,758	1,252	12,406	-	182,416
Trade payables	125,652	-	-	-	125,652

  

Dec 31 2016	up to 3 months	from 3 to 12 months	from 1 year to 5 years	over 5 years	Total
Interest-bearing borrowings	50,206	361,658	467,558	618,887	1,498,309
Other liabilities	226,290	1,284	7,462	-	235,036
Trade payables	156,168	-	4	-	156,172

## 16. Capital management

The primary objective behind the Group's capital management is to maintain good credit rating and safe capital ratios, in order to support the Group's operations and build shareholder value.

The Group manages its capital structure and modifies it in response to changes in the economic environment. To maintain or adjust its capital structure, the Group may introduce changes regarding dividend distribution, return capital to the shareholders, or issue new shares. In the period ended March 31st 2017 and in the year ended December 31st 2016, there were no changes in the capital structure management objectives, policies and processes.

The Group monitors its capital position using the leverage ratio, calculated as the ratio of net debt to the sum of total equity and net debt. The Group's net debt includes interest-bearing borrowings, cash and cash equivalents.

	Mar 31 2017	Dec 31 2016
Interest-bearing borrowings	1,083,959	1,116,653
Less cash and cash equivalents	(347,133)	(380,862)
<b>Net debt</b>	<b>736,826</b>	<b>735,791</b>
Equity	1,269,767	1,267,426
<b>Total equity</b>	<b>1,269,767</b>	<b>1,267,426</b>
<b>Equity and net debt</b>	<b>2,006,593</b>	<b>2,003,217</b>
Leverage ratio	37%	37%

## 17. Events subsequent to the date as at which these interim condensed financial statements were prepared, which have not been presented in the statements but may have a material bearing on future financial performance

As at the date of preparation of these interim condensed consolidated financial statements, i.e. May 11th 2017, no events had occurred which should have been but were not disclosed in the accounting records for the reporting period.

**C. OTHER INFORMATION TO THE CONSOLIDATED QUARTERLY REPORT**

**1. Discussion of key financial and economic data contained in the interim financial statements, in particular factors and events, including non-recurring ones, with a material effect on the issuer's operations and profits earned or losses incurred in the financial year; discussion of development prospects in a period covering at least the next financial year**

Key economic and financial data concerning the Company's performance:

Key economic and financial data [PLNm]	Jan 1–Mar 31		Change
	2017	2016	
Revenue	709.9	722.5	(12.6)
EBITDA	43.2	87.8	(44.6)
Adjusted EBITDA	42.5	87.1	(44.6)
Net profit/(loss)	1.6	36.4	(34.8)
Adjusted net profit after elimination of purchase price allocation effect, unrealised exchange differences, impairment losses, loan valuation and discount valuation.	2.9	38.6	(35.7)

In comparison with the corresponding period of 2016, Q1 2017 performance was driven by the following factors:

**a) EBITDA (down by PLN 44.6m):**

- Weaker performance of the conventional energy segment (down PLN 14.3m) following a revision (in Q1 2016) of the forecast prices of electricity, coal, gas and CO<sub>2</sub> in 2016–2020, which led to a change in the allocation of stranded costs compensation income in the entire period of the compensation scheme: 2008–2020.

In accordance with the Accounting Policy of Elektrociepłownia Nowa Sarzyna (the Nowa Sarzyna CHP Plant), the change in the allocation of stranded costs relating to prior years (2008–2015) was recognised in Q1 2016, leading to the relatively high Q1 2016 operating result compared with Q1 2017;

- Worse performance in the renewable energy segment (down PLN 21.9m), attributable primarily to less favourable wind conditions and lower prices of green certificates, as well as higher costs of the property tax in the case of some wind farm projects, though partly offset by savings on technical maintenance of two farms following a renegotiation of the maintenance contract;
- Weaker performance in the trading segment (down PLN 5.9m) caused mainly by lower valuation of the certificate portfolio. This negative effect was only partially offset by improved performance in the gas and electricity trading business and in the new CO<sub>2</sub> trading segment.
- Poorer performance in the distribution segment (down PLN 2.9m) – the segment's results in Q1 2016 were boosted by reversal of a provision for settlements with a trading partner;
- Worse performance in the biomass segment (down PLN 2.2m) chiefly due to a lower sales volume;
- Lower expenses in the development segment (down PLN 0.1m) resulting from tighter cost discipline;
- Lower (by PLN 2.4m) unallocated Group management costs;

**b) Adjusted EBITDA (down PLN 44.6m):**

- Impact of EBITDA described above (down PLN 44.6m);

- c) Net profit for Q1 2017 amounted to PLN 1.6m vs PLN 36.4m in the corresponding period of the previous year (down PLN 34.8m), due to:**
- Impact of EBITDA (down PLN 44.6m);
  - Lower depreciation and amortisation excluding depreciation and amortisation related to purchase price allocation (down PLN 2.2m), primarily due to a change in the policy concerning the useful lives of wind farm projects (extension of the economic useful lives of turbines to 25 years after taking into account certain technical factors identified in the course of a dialogue with turbine manufacturers);
  - Higher finance income (up PLN 2.2m), as a result of higher interest on deposits and foreign exchange gains;
  - Higher finance costs (up PLN 2.5m), primarily due to higher interest and commission expenses (up PLN 2.0m) as a result of capitalisation of some of the finance costs relating to the Mycielín project in the corresponding period of 2016 as they were incurred in the start-up phase (in accordance with the adopted accounting policies) – in 2017, all finance costs were taken directly to the statement of profit or loss;
  - Lower income tax (down PLN 7.8m) attributable to lower profit before tax;
- d) Additional adjustments were recognised at the adjusted net profit level related to purchase price allocation, effect of unrealised exchange differences and valuation of a loan at amortised cost, as a result of which adjusted net profit for Q1 2017 reached PLN 2.9m, compared with PLN 38.6m in the corresponding period of the previous year (down PLN 35.7m).**

## 2. Brief description of significant achievements or failures in the reporting period, including identification of key events

### CONVENTIONAL ENERGY

#### Nowa Sarzyna CHP Plant (ENS)

Since the beginning of 2017, the plant has operated as planned.

ENS' weaker operating performance in Q1 2017 relative to Q1 2016 is mainly attributable to a revision in Q1 2016 of the forecast prices of electricity, gas and CO<sub>2</sub> in 2016–2020, which triggered a change in the allocation of stranded costs compensation income in the entire period of the compensation scheme: 2008–2020.

#### Mercury Power Plant

The improvement in operating performance in the reporting quarter relative to the corresponding period of the previous year is attributable to higher electricity sales volumes and lower prices of green certificates and CO<sub>2</sub> emission allowances.

#### Zakrzów CHP Plant

On June 16th 2016, the Company finalised the sale of power generation assets comprising the Zakrzów CHP Plant and two SPVs.

### WIND POWER

The wind power segment's overall performance deteriorated year on year.

The lower EBITDA was mainly due to a drop in prices of green certificates and higher property tax, although partly offset by lower technical maintenance costs. Below is presented detailed information on individual wind farms:

#### Puck Wind Farm

Electricity output of the Puck Wind Farm (22 MW) declined year on year, which – combined with lower prices of green certificates – translated into a lower operating result posted by the farm.

The operating result was also adversely affected by technical maintenance costs incurred on replacement of a damaged gearbox.

Property tax remained unchanged thanks to a favourable interpretation of tax regulations by the municipality.

Negotiations are under way with the banks to reprofile debt.

#### Łukaszów and Modlikowice Wind Farms

Electricity output at these two wind farms (34 MW and 24 MW, respectively) was lower than that recorded in the corresponding period of the previous year, and the prices of green certificates also fell. The negative effect of the above factors was partly offset by savings on technical maintenance costs.

Polska Kompania Handlowa continues not to perform the green certificate purchase agreements, thus the two farms must sell green certificates at market prices.

Negotiations with a bank syndicate to restructure debt are ongoing.

The Group cannot rule out that in view of the market situation and the course of the negotiations with the bank syndicate, Amon Sp. z o.o. and Talia Sp. z o.o. will have to draw funds from their debt servicing reserve in the current financial year.

#### Gawłowice, Skurpie and Rajgród Wind Farms

The operating performance of the Gawłowice (48.3 MW), Skurpie (43.7MW) and Rajgród (25.3 MW) wind farms deteriorated compared with the corresponding period of 2016 due to a drop in power output volumes, lower market prices of green certificates, and higher costs of property tax.

Negotiations are under way with the bank syndicate to reprofile the debt.

#### Mycielin Wind Farm

The operating performance of the Mycielín (48 MW) wind farm declined relative to in the corresponding period of 2016 due to a drop in power output volumes, lower market prices of green certificates, and higher costs of property tax.

After to the reporting date, on April 21st 2017, one of the Mycielín Wind Farm turbines broke apart and collapsed, scattering debris on the ground in the immediate vicinity of the turbine. The event did not cause any injuries to persons or damage to third-party property. In connection with the incident at the Mycielín Wind Farm, Polenergia, acting jointly with the relevant services and the technology supplier and guarantor (Vestas), took measures to secure the scene of the event. The wind turbine failure did not cause any injuries to persons or damage to third-party property. In order to eliminate the likelihood of any further similar events, the Company instructed Vestas, the manufacturer of the wind turbines, to check the safety of the other turbines. To note, the damaged wind turbine is under warranty from Vestas and Vestas are fully responsible for the maintenance of the wind turbines in the Mycielín Wind Farm.

Negotiations are under way with the bank syndicate to reprofile the debt.

### **DISTRIBUTION**

In Q1 2017, Polenergia Dystrybucja and Polenergia Kogeneracja operated in line with the plan. The EBITDA posted by Polenergia Dystrybucja was a little lower (by 2%) year on year due to slightly higher operating expenses. On the other hand, EBITDA recorded by Polenergia Kogeneracja was significantly lower due to the high base in 2016 (non-recurring events).

### **ENERGY TRADING AND SALE**

The segment's operations went on without any disruptions. However, the performance delivered by the segment in the first quarter of 2017 was significantly weaker year on year. The decline was mainly attributable to the lower prices of green certificates, which eroded the return on the certificate portfolio. This negative effect was partially offset by better results on gas and electricity trading.

### **BIOMASS**

The segment's overall performance declined year on year. Below is presented detailed information on individual companies.

#### Biomasa Energetyczna Północ

In Q1 2017, the sales volume of company-produced pellets was lower than in the same period a year earlier. As a result of lower output volume, the plant's operating margin fell year on year.

### Biomasa Energetyczna Południe

In Q1 2017, the sales volume of pellets was lower compared with the corresponding period of the previous year, primarily due to the expiry of the contract for sale of pellets to EDF, effective until the end of August 2016. As a result of a lower output volume, the plant's operating margin deteriorated year on year.

### Biomasa Energetyczna Wschód

In Q1 2017, the sales volume of company-produced pellets remained relatively flat compared with the same period a year earlier. The margin contracted due to a drop in average selling prices, partly offset by lower technical maintenance costs. As a result, in Q1 2017 the plant's operating performance deteriorated year on year.

## **DEVELOPMENT AND IMPLEMENTATION**

### Onshore wind farms

At present, the Company's portfolio includes projects with an aggregate capacity of 267 MW which are ready for construction (the building permits have been obtained). These projects are ready for participation in the auction process (pre-qualification).

### Development of offshore wind farms

The Group plans to construct two offshore wind farms on the Baltic Sea (Bałtyk Środkowy II and Bałtyk Środkowy III) with an aggregate capacity of up to 1,200 MWe, including 600 MWe by 2022 and 600 MWe by 2026.

Both projects have obtained environmental permits issued by the Regional Director for Environmental Protection in Gdańsk: for Bałtyk Środkowy III in July 2016 and for Bałtyk Środkowy II in April 2017.

The offshore wind farm project is of a long-term nature: the first wind farm is planned to be placed in service in 2022. The Group plans to develop offshore wind farm projects in partnership with another entity and, if applicable, sell equity interests with a view to maximising the value for shareholders.

### Development of the Elektrownia Północ Power Plant project

The Group is developing a hard-coal fired power plant in northern Poland. Ultimately, the Elektrownia Północ Power Plant project will comprise two 800 MWe power generating units.

The Group plans to sell this project.

### Biomass-fired power plant

As regards the development of energy generation outsourcing and generation of energy from biomass, the Group is working on a project providing for the construction and operation of a 31 MW biomass-fired power plant connected to the power grid. A final building permit has been issued for the project. Furthermore, the planning consent documents for a power evacuation line have been prepared and an application for a building permit for the line has been submitted. Also, an application for an integrated permit for the power plant has been filed. Implementation of this project is conditional on acquiring the ownership title to the property where the power plant is to be located. The property is currently owned by the municipality. The Group assumes that this project will participate in auctions.

### 3. Management Board's position on the feasibility of meeting any previously published forecasts for a given year in light of the results presented in the quarterly report

As announced on July 6th 2016 in Current Report No. 21/2016, the Company does not intend to publish any performance forecasts for the coming years before the regulatory environment for renewable energy generation stabilises.

### 4. Factors and events, especially of non-recurring nature, with a material bearing on financial performance

For more information on factors with a material bearing on financial performance, see Section A.1 and C.1-2 of this report.

### 5. Shareholders holding, directly or indirectly through subsidiaries, 5% or more of total voting rights at the General Meeting of the issuer as at the date of issue of the quarterly report, including information on the number of shares held by those shareholders, their interests in the share capital, the resulting number of votes at the General Meeting and their share in total voting rights at the General Meeting, and any changes in the ownership structure of major holdings of the issuer shares after the issue of the previous quarterly report

No.	Shareholder	Number of shares	Number of voting rights	% interest
1	Kulczyk Investment S.A.*	22,811,757	22,811,757	50.20%
2	China - Central and Eastern Europe Investment Co-operation Fund SCS SICAV-SIF**	7,266,122	7,266,122	15.99%
3	ING OFE	2,576,969	2,576,969	5.67%
4	Generali OFE	2,943,731	2,943,731	6.48%
5	Aviva OFE	3,060,872	3,060,872	6.74%
6	Other	6,748,069	6,748,069	14.93%
	<b>Total</b>	<b>45,443,547</b>	<b>45,443,547</b>	<b>100%</b>

\* Through Mansa Investments Sp. z o.o., a subsidiary.

\*\* Through Capedia Holdings Limited of Nicosia, Cyprus, a subsidiary.

### 6. Effects of changes in the Group's structure, including changes resulting from mergers, acquisitions or disposals of Group entities, long-term investments, demergers, restructuring or discontinuation of operations

In Q1 2017, ended March 31st 2017, there were no changes resulting from business combinations, acquisitions or disposals of Group entities, long-term investments, demergers, restructuring or discontinuation of operations.

### 7. General information

The Polenergia Group, formerly Polish Energy Partners S.A. (the company registered the change of its name with the National Court Register on September 11th 2014), (the 'Group') comprises Polenergia S.A. (the 'Company', the 'parent') and its subsidiaries. The Company was established under a notary deed of July 17th 1997. The Company is entered in the National Court Register maintained by the District Court for the Capital City of Warsaw, 20th Commercial Division of the National Court Register, under KRS No. 0000026545. The Company's Industry Identification Number (REGON) is 012693488. The Company's registered office is at ul. Krucza 24/26 in Warsaw.

According to the entry in the National Court Register, the Company's business comprises:

- production and distribution of electricity (PKD 40.10),
- production and distribution of heat (steam and hot water) (PKD 40.30),
- construction and civil engineering (PKD 45.21),
- construction installation activities (PKD 45.3),
- other credit granting, excluding licensed activities and activities reserved for banks (PKD 65.22),

- research and development of natural sciences and engineering (PKD 73.10),
- development and sale of own real estate (PKD 70.11),
- operating of real estate on a fee or contract basis (PKD 70.32),
- accounting and bookkeeping activities (PKD 74.12),
- construction and process design, urban planning (PKD 74.20),
- business and management consultancy activities (PKD 74.14),
- other commercial activities n.e.c. (PKD 74.84),
- other education n.e.c. (PKD 80.42),
- wholesale of solid, liquid and gaseous fuels and related products (PKD 51.51).

The scope of activities of the subsidiaries is related to the operations of the parent.

## 8. Composition of the Parent's Management and Supervisory Boards

As at March 31st 2017, the composition of the Parent's Management Board was as follows:

Jacek Głowacki	Vice President of the Management Board
Bartłomiej Dujczyński	Member of the Management Board
Michał Michalski	Member of the Management Board

As at March 31st 2017, the composition of the Parent's Supervisory Board was as follows:

Tomasz Mikołajczak	Chairman of the Supervisory Board
Łukasz Rędziniak	Member of the Supervisory Board
Dominik Libicki	Member of the Supervisory Board
Mariusz Nowak	Member of the Supervisory Board
Arkadiusz Jastrzębski	Member of the Supervisory Board
Brian Bode	Member of the Supervisory Board
Dagmara Gorzelana-Królikowska	Member of the Supervisory Board
Dawid Jakubowicz	Member of the Supervisory Board
Orest Nazaruk	Member of the Supervisory Board

## 9. Legal environment

### 9.1 Introduction

The operations of the Group companies are subject to numerous Polish and EU regulations. The Polish regulations include, in particular, the following legal acts:

- the Energy Law with the secondary legislation;
- the LTC Act;
- the Geological and Mining Law, dated June 9th 2011 (Dz.U.2016.1131 of July 28th 2016);
- the Act on Marine Areas of the Republic of Poland and Maritime Administration, dated March 21st 1991 (Dz.U.2016.2145 of December 23rd 2016);
- the Act on Trading in Greenhouse Gas Emission Allowances, dated June 12th 2015 (Dz.U.2017.568 of March 17th 2017);
- the Act on the System of Managing Emissions of Greenhouse Gases and Other Substances, dated July 17th 2009 (Dz.U.2017.286 of February 17th 2017);
- the Environmental Protection Law, dated April 27th 2001 (Dz.U.2017.519 of March 13th 2017);
- the Act on Disclosure of Information on the Environment and Environmental Protection, Public Participation in Environmental Protection and on Environmental Impact Assessment, dated October 3rd 2008 (the "Environmental Impact Assessment Act") (Dz.U.2016.353 of March 16th 2016); the Act on Prevention of Environmental Damage, dated April 13th 2007 (Dz.U.2014.1789 of December 12th 2014);
- the Nature Conservation Act, dated April 16th 2004 (Dz.U.2016.2134 of December 23rd 2016);
- the Act on Renewable Energy Sources, dated February 20th 2015 (Dz.U.2015.478 of April 3rd 2015);
- the Act on Wind Farm Projects, dated May 20th 2016 (Dz.U.2016.961 of July 1st 2016);
- the Act on Spatial Planning and Development, dated March 27th 2003 (Dz.U.2016.778 of June 4th 2016);
  - the Waste Act, dated December 14th 2012 (Dz.U.2016.1987 of December 9th 2016);
  - the Water Law, dated July 18th 2001 (Dz.U.2015.469 of April 1st 2015).

The EU regulations include:

- Directive 2009/72/EC of the European Parliament and of the Council of July 13th 2009 concerning common rules for the internal market in electricity and repealing Directive 2003/54/EC;
- Directive 2009/28/EC of the European Parliament and of the Council of April 23rd 2009 on the promotion of the use of energy from renewable sources and amending and subsequently repealing Directives 2001/77/EC and 2003/30/EC;
- Directive 2010/75/EU of the European Parliament and of the Council of November 24th 2010 on industrial emissions (integrated pollution prevention and control);
- Directive 2004/35/EC of the European Parliament and of the Council of April 21st 2004 on environmental liability with regard to the prevention and remedying of environmental damage;
- Directive 2011/92/EU of the European Parliament and of the Council of December 13th 2011 on the assessment of the effects of certain public and private projects on the environment;
- Directive 2009/29/EC of the European Parliament and of the Council of April 23rd 2009 amending Directive 2003/87/EC so as to improve and extend the greenhouse gas emission allowance trading scheme of the Community;

- Directive 2003/87/EC of the European Parliament and of the Council of October 13th 2003 establishing a scheme for greenhouse gas emission allowance trading within the Community and amending Council Directive 96/61/EC.

The key laws and regulations affecting the Group's operations are presented and briefly discussed in this section.

## 9.2 Key regulations applicable to the energy sector

The main legislative act governing the activities of the energy sector in Poland is the Energy Law, along with its secondary legislation. The Energy Law lays down the rules governing the development of the state's energy policy, rules and conditions for supply and use of fuels and energy, including heat, and operation of energy companies, and specifies the authorities competent for fuel and energy management. The purpose of the Energy Law is to create conditions for the sustainable development of the country, its energy security, efficient and rational use of fuels and energy, development of competition, prevention of negative consequences of natural monopolies, respect for environmental protection requirements and obligations arising from international agreements, as well as to balance the interests of energy companies with those of fuel and energy consumers.

The Energy Law also sets forth the rules for the development of the national energy policy, which is drafted and approved by the Council of Ministers every four years. On November 10th 2009, the Council of Ministers approved Poland's Energy Policy until 2030, which sets out the key directions of the energy policy and measures for its implementation.

The power sector is also subject to European Law, and particularly Directive 2009/72/EC of the European Parliament and of the Council of July 13th 2009 concerning common rules for the internal market in electricity and repealing Directive 2003/54/EC (OJ L 211/55 of August 14th 2009), as well as regulations adopted as part of the third energy package.

### 9.2.1 Regulatory body for the Polish energy sector

The regulatory body whose remit includes fuel and energy management and promotion of competition is the President of URE (Polish Energy Regulatory Authority), a central government authority. The President of URE is appointed by the Prime Minister from among candidates selected in an open and competitive recruitment procedure, on the recommendation of the minister competent for economy. The President of URE is also removed by the Prime Minister.

In particular, the responsibilities of the President of URE include:

- Granting and revoking of licenses,
- Approval of gas, electricity and heat tariffs and oversight of their application,
- Supervision of compliance with the requirement to redeem certificates of origin or pay the emission charge (i.e. supervision of the mechanism of support for renewable energy sources),
- Approval of the Grid Code,
- Resolution of certain disputes between energy companies and between energy companies and consumers (for instance disputes concerning refusal to connect a consumer to the grid),
- Imposition of fines on energy companies in accordance with the rules set out in the Energy Law,
- Issuance and redemption of certificates of origin and co-generation certificates of origin.

If an energy company is found to be in breach of its obligations under the Energy Law, the President of URE may impose on the company a fine which may not exceed 15% of the previous fiscal year's revenue of that company, and if the fine is charged in connection with licensed activities, it may not exceed 15% of the company's revenue derived from its licensed activities in the previous fiscal year. The President of URE may also impose a fine on the head of an energy company, which, however, may not exceed 300% of their monthly remuneration. In determining the amount of a fine, the President of URE takes into account the extent of the adverse effects of the breach, the company's culpability, its previous practice and financial condition. The President of URE may decide not to impose a fine if the extent of adverse effects of the breach is insignificant and the company has ceased to be in breach of the law or has performed its obligation.

### 9.2.2 Licences

In accordance with the Energy Law, a licence is required, with certain exceptions specified therein, to conduct the following business activities:

- Electricity or heat generation,
- Electricity or heat transmission or distribution,
- Trade in electricity or heat.

Licences are granted by the President of URE to an applicant that meets the conditions specified in the Energy Law, provided that no circumstances occur, as specified in the Energy Law, that would prevent the granting of a licence. Licences are granted for a fixed term of at least 10 years, and 50 years as a maximum unless an application for a shorter term is filed. Energy companies may apply for licence extension not later than 18 months prior to licence expiry. Where so stipulated by the Energy Law, the President of URE may, or in certain cases is required to, revoke the licence or modify its scope.

Licence holders pay annual fees to the state budget, charged to their operating expenses. A relevant regulation of the Council of Ministers determines the amount and method of collection by the President of URE of annual fees payable by licence holding energy companies. The amount of the annual fee is calculated based on the energy company's revenues derived from activities covered by the licence. The fee for each type of activity covered by the licence may not be lower than PLN 200 nor higher than PLN 1,000 thousand. If multiple activities requiring a licence are conducted, the final fee is the total of fees for the individual activities.

### 9.2.3 Tariffs

The prices and rates charged for the supply of electricity, heat or gas fuel to consumers are specified by energy companies in tariffs approved by the President of URE or determined on the competitive market (in the case of entities exempt from the obligation to submit their tariffs for approval to the President of URE).

Licence holders determine electricity, heat and gas fuels tariffs, which are subject to approval by the President of URE, on their own initiative or at the request of the President of URE, and indicate a proposed validity period for the tariffs. In accordance with the Energy Law, energy companies determine electricity, heat and gas fuels tariffs, as applicable, depending on their scope of business, in line with the terms provided for in the Energy Law and relevant secondary legislation. Tariffs should be calculated in a way ensuring the coverage of energy companies' reasonable operating expenses (related to the activity subject to the tariff, e.g. heat generation) and a reasonable return on capital employed in that activity, coverage of reasonable expenses incurred by distribution and transmission system operators in connection with the performance of their tasks, and protection of customers' interests against unreasonably high prices and charge rates. The detailed rules for calculating tariffs are set out in the Polish Energy Law and relevant secondary legislation. The President of URE approves the tariffs or rejects them if a tariff is found to be incompliant with the Energy Law and its secondary legislation.

The President of URE may exempt an energy company from the obligation to submit its tariffs for approval if the President of URE confirms that the energy company operates in a competitive environment, or may revoke an exemption if the conditions justifying the exemption are no longer met. The exemption may apply to a specific part of the business conducted by the energy company, to the extent to which that business is conducted on the competitive market.

The President of URE had exercised that right on numerous occasions, gradually exempting power sector companies from the obligation to submit their tariffs for approval. In consequence, the obligation to submit tariffs for approval to the President of URE applies only to the tariffs of those power sector companies whose business consisted in the transmission and distribution of electricity, as well as tariffs for electricity sold to customers who do not conduct business activities, mainly households (tariff group G).

The Group company whose business activity is electricity distribution and sale of electricity to households (Polenergia Dystrybucja) is required to submit electricity tariffs for approval to the President of URE.

In the heat sector, the President of URE has not granted any exemptions from the obligation to submit tariffs for approval, hence the tariffs concerning all types of heat-related operations are required to be

submitted for approval by the President of URE. This obligation also applies to the heat producers from the Group.

In the gas sector, the President of URE ruled that the obligation to submit tariffs for approval does not apply to gas fuel trading on a commodity exchange (or a regulated market). As regards gas fuel trading between trading companies and LNG trading, the President of URE stated that the exemption is granted to the interested energy company upon application to the President of URE. As a result, the obligation to submit tariffs for approval applies to one Group company (Polenergia Kogeneracja), which operates in the area of gas fuel trading and distribution.

It is not certain whether the exemption from the obligation to submit tariffs for approval involves an exemption from the obligation to determine the tariffs in line with the regulations of the Energy Law and relevant secondary legislation. In accordance with the relevant provisions of the Energy Law, the President of URE has the right to grant an exemption from the obligation to submit tariffs for approval, but not from the obligation to apply tariffs. In practice, however, a different interpretation is applied, according to which an exemption from the obligation to submit electricity tariffs for approval is tantamount to an exemption from the obligation to apply tariffs. As a consequence, a number of entities operating on the market (including Group companies) in business activities for which the President of URE exempted them from the obligation to submit tariffs for approval, began to apply prices and rates determined on the competitive market, which may not meet all the requirements set out in the Energy Law and relevant secondary legislation pertaining to the method of determination and calculation of such tariffs.

#### **9.2.4 Right to free choice of suppliers and the right of access to the grid (TPA)**

The Energy Law, implementing in this respect the EU legislation, provides for the right of free choice of supplier and access to the grid.

The right of free choice of supplier means that consumers may purchase electricity from a supplier of their choice (producer, trading company). In accordance with the right of access to the grid, energy companies involved in electricity transmission or distribution are obliged to provide all customers and energy traders, on a non-discriminatory basis, with transmission or distribution services on the terms and in the scope specified in applicable laws. Energy transmission and distribution services are provided on a contractual basis.

#### **9.2.5 Grid connection**

Pursuant to the Energy Law, energy companies involved in energy transmission or distribution are required to conclude, on a non-discriminatory basis, grid connection agreements with entities applying for grid connection if it is technically and economically feasible to make the connection and supply energy and the applicant satisfies the conditions for grid connection and receipt of energy. If an energy company refuses to conclude a grid connection agreement, it is obliged to immediately send a written notification of the refusal to the President of URE and the entity applying for connection, specifying the reasons for the refusal.

At the request (meeting the conditions defined in the Energy Law and the secondary legislation thereto) of the entity applying for connection, if it is technically and economically feasible to make the connection and supply energy and the applicant satisfies the conditions for grid connection and receipt of energy, the energy company issues grid connection conditions valid for two years from delivery. In the validity period, the grid connection conditions represent a conditional obligation of the energy company to conclude the grid connection agreement.

Energy companies involved in energy transmission or distribution are obliged to ensure the execution and financing of grid construction and extension, including for the purpose of connecting the entity applying for connection, on the terms specified in detail in the secondary legislation to the Energy Law and in assumptions to local governments' electricity and heat supply plans or in local governments' electricity and heat supply plans.

Any disputes concerning, among other things, refusal to conclude a grid connection agreement are resolved by the President of URE at the request of either party.

Grid connection is subject to a fee set in accordance with the Energy Law. Grid connection of power generation facilities is subject to a fee calculated on the basis of the actual connection cost, except for renewable energy sources with an installed capacity of 5 MWe or less and cogeneration units with an installed electrical capacity of less than 1 MWe, which are subject to a fee equal to a half of the fee

calculated on the basis of the actual costs incurred, and microinstallations, which are connected for free.

If an energy company refuses to conclude a grid connection agreement due to economic infeasibility, the energy company may charge a connection fee in an amount agreed upon with the entity applying for connection in the grid connection contract.

An applicant for connection to the electricity grid with a source whose rated voltage is higher than 1kV is required to make an advance payment towards the grid connection fee. The advance is calculated at the rate of PLN 30 per each kilowatt of connected load as specified in the grid connection application. However, the total amount of the advance may not exceed the expected grid connection fee, subject to a PLN 3m cap.

A grid connection agreement for a RES unit should also specify a deadline for the first supply to the power grid of electricity generated by such RES unit, with the proviso that the deadline cannot be longer than 48 months, and in the case of RES units using offshore wind power – 120 months, from the agreement execution date. Failure to make the first supply to the power grid of electricity generated by such RES unit within the deadline specified in the grid connection agreement may result in termination of the agreement. For existing agreements, such deadlines are to be counted from the effective date of the Act on Renewable Energy Sources.

### **9.2.6 Supplier of last resort**

Pursuant to the Energy Law, a supplier of last resort (in the power sector) is an energy which holds a licence for trade in electricity and provides comprehensive services to household consumers of electricity or gas fuels who do not exercise their right to choose their supplier. A comprehensive service is provided under an agreement that incorporates the provisions of an agreement on the sale of energy and an agreement on the provision of energy transmission or distribution services.

The supplier of last resort is selected (or appointed where the tender does not result in supplier selection) in accordance with the detailed procedure set forth in the Energy Law, the supplementary legislation thereto and applicable transitional provisions.

### **9.2.7 Requirement of public sale of electricity by producers**

In accordance with the Energy Law, an energy company engaged in generation of electricity is required to sell at least 15% of electricity produced in a given year on commodity exchanges within the meaning of the Act on Commodity Exchanges of October 26th 2000 or on a market organised by the entity operating the regulated market in Poland.

In addition, an energy company engaged in generation of electricity which is entitled to receive funds to cover its stranded costs under the Act on Rules of Compensating Costs Incurred by Energy Producers Due to Early Termination of Long-Term Capacity and Electricity Purchase Agreements, dated June 29th 2007, is required to sell any generated volumes of electricity which are not required to be sold on a commodity exchange in a manner ensuring public and equal access to such electricity, in an open auction, on a market organised by the entity operating the regulated market in Poland or on a commodity exchange, within the meaning of the Act on Commodity Exchanges of October 26th 2000.

This obligation does not apply to electricity:

- Supplied by the energy company engaged in generation of electricity to an end user via a direct line;
- Produced from a renewable energy source;
- Produced in a cogeneration process with an average annual efficiency of conversion of chemical energy of the fuel into electrical or mechanical energy and useful heat in cogeneration above 52.5%;
- Used by the energy company engaged in generation of electricity for its own needs;
- Necessary for power system operators to perform the activities specified in the Energy Law;
- Produced in a generating unit with a total installed capacity of up to 50 MWe.

The President of URE may also exempt an energy company from the above requirement to the extent related to generation of electricity sold in the performance of long-term obligations under contracts executed with financial institutions with a view to implementing projects related to electricity generation, or generated to meet the needs of a transmission system operator and used to ensure proper

functioning of the national power grid, provided that such exemption does not cause a material distortion of competition on the electricity market or a disruption on the balancing market.

Group companies are not subject to the requirement of public sale of electricity as they generate electricity from renewable energy sources or because their units have low installed capacities. Also Elektrociepłownia Nowa Sarzyna is not subject to the requirement of public sale of electricity as the capacity of any of its three generating units does not exceed 50 MWe. The rightfulness of the exemption from the requirement has been confirmed by the decision of the President of URE.

### **9.2.8 Fuel stocks**

In accordance with the Energy Law, an energy company engaged in generation of electricity or heat is obliged to maintain fuel stocks at a level which allows it to maintain continuity of the electricity or heat supplies to customers. The precise quantities of hard coal, lignite and fuel oil stocks to be maintained are specified in a relevant regulation of the minister competent for economy.

The Energy Law defines situations in which stocks can be reduced as well as situations where they must be replenished. Compliance with the requirement to maintain specific amounts of fuel stocks can be inspected by the President of URE. If it is found that an energy company fails to meet the requirement, the President of URE may, among other things, impose a fine of up to 15% of the company's revenue derived from licensed activities in the previous fiscal year.

### **9.2.9 Laws applicable to energy from renewable energy sources and cogeneration**

Energy companies specified in the RES Act (mainly energy companies engaged in the generation of or trade in electricity and selling electricity to end users connected to the grid in Poland) are also required, to the extent specified in secondary legislation, to obtain certificates of origin or else pay a relevant emission charge.

The requirement to obtain certificates of origin and submit them for redemption to the President of URE, or else to pay an emission charge, is considered satisfied if in a given year the share of the total volume of electricity credited under the certificates submitted for redemption, or of the emission charge paid by the energy company, in the energy company's total annual volume of electricity sales to end users is at least equal to the values specified in a relevant regulation issued by the Minister of Economy.

Certificates of origin are issued by the President of URE at the request of the energy company engaged in generation of electricity from renewable sources, submitted through the power system operator in charge of the operating area where the renewable energy source specified in the request is located.

Property rights incorporated in certificates of origin arise as of the first-time registration of the certificates in a relevant account of the certificates of origin register, and inure to the benefit of the holder of that account. Property rights incorporated in certificates of origin are transferable and represent a commodity as defined in the Act on Commodity Exchanges of October 26th 2000.

An alternative to fulfilling the requirement by way of certificates redemption is the payment of a relevant emission charge. The unit emission charge (for 1 MWh) is PLN 300.03.

An emission charge is the product of the unit emission charge and the difference between the volumes of electricity in MWh resulting from the requirement to obtain certificates of origin and submit them for redemption.

If a supplier of last resort fails to comply with the obligation to purchase electricity generated from renewable energy sources, the supplier is subject to a fine amounting to no less than the product of the average selling price of electricity for the previous calendar year, expressed in PLN per 1 MWh, and the difference between the volume of electricity produced from renewable energy sources and offered for sale, expressed in MWh, and the volume of electricity produced from renewable energy sources and purchased in a given year, expressed in MWh.

If the requirement to obtain certificates of origin and submit them for redemption by the President of URE is not complied with, the company is obliged to pay an emission charge. If the requirement is not complied with and the emission charged is not paid, the company is subject to a fine equal to or higher than the product of 1.3 and the difference between the emission charge due and actually paid.

On October 26th 2016, a regulation of the Minister of Energy was promulgated under which in 2017 the requirement to redeem certificates of origin for energy generated from agricultural biogas will be 0.6%

of electricity sales to end users and 15.4% in the case of certificates of origin for energy generated from other renewable energy sources.

In addition, in accordance with the assumptions of the climate and energy package, the share of renewable energy in the EU energy mix is expected to increase to 20% by 2020. Directive 2009/28/EC of the European Parliament and of the Council of April 23rd 2009 on the promotion of the use of energy from renewable sources and amending and subsequently repealing Directives 2001/77/EC and 2003/30/EC (OJ L 140, 2009, p. 16), sets a different target share for each Member State. In the case of Poland, the target share of energy from renewable sources in final consumption is 15%, to be achieved by 2020.

Under the RES Act, which entered into force on May 4th 2015 (except for the provisions concerning the support system for energy from renewable sources, which took effect on July 1st 2016), the system of green certificates is available for all wind farm projects placed in service before July 1st 2016. The green certificate rights exist for a period of 15 years from the date of launching electricity generation for which it was possible to obtain green certificates (continuation of the green certificates system). All projects under the existing certificate system will be allowed to switch to the auction-based system.

The new, auction-based, system will give project operators the ability to obtain the right to receive compensation for the difference between the auction price and the market price in the period of 15 years from the date of launching operations. The price obtained in an auction will be indexed.

The target volume of energy for which an auction is held will be determined five times for three-year periods. Every year, the Ministry of Economy will set a reference price for each technology, taking into account the average capital expenditure and operating costs for standard projects. Only bids with prices equal to or lower than the reference price for a given technology will be considered. All technologies will be able to participate in the same auctions.

#### **Electricity from high-efficiency cogeneration**

The Energy Law also provides for a system of support for units producing electricity in high-efficiency cogeneration, similar to the support system for renewable energy sources. The system is also based on a certificates of origin scheme:

- ‘Yellow certificates’ are issued for cogeneration units fired with gaseous fuels or having a total installed capacity of less than 1 MWe,
- ‘Violet certificates’ are issued for cogeneration units fired with methane released and captured during underground mining operations in active, inactive or decommissioned coal mines, or gas obtained from biomass processing, within the meaning of Art. 2.1.2 of the Act on Biocomponents and Liquid Biofuels,
- ‘Red certificates’ are issued for units other than those described above (mainly coal- and biomass-fired units).

The system of support under the red and yellow certificates scheme will operate until June 30th 2019.

Similarly to green certificates, energy companies specified in the Energy Law (mainly energy companies engaged in the generation or trade in electricity and selling electricity to end users connected to the grid in Poland) are required, to the extent specified in the applicable legal regulations, to obtain cogeneration certificates of origin or else pay a relevant emission charge.

The requirement to obtain cogeneration certificates of origin and submit them for redemption to the President of URE, or else to pay an emission charge, is considered satisfied if in a given year the share of the total volume of electricity credited under the cogeneration certificates submitted for redemption, or of the emission charge paid by the energy company, in the energy company’s total annual volume of electricity sales to end users is at least equal to the values specified in a relevant act (amending the Energy Law).

The Energy Law also governs the calculation of the amount of a relevant emission charge (which is different for individual types of certificates), origination of property rights incorporated in certificates of origin for electricity produced in high-efficiency cogeneration, and fines for non-compliance with the requirement to redeem cogeneration certificates of origin or pay a relevant emission charge.

### 9.2.10 Stranded costs

The LTC Act defines the terms of compensating costs incurred by energy producers due to early termination of long-term capacity and electricity purchase agreements, as specified in Appendix 1 to the Act, including the terms of:

- Early termination of long-term contracts;
- Financing of costs which arose due to early termination of long-term contracts ('stranded costs');
- Payment of funds to compensate for stranded costs;
- Calculation, adjustment and settlement of stranded costs;
- The operation of 'Zarządca Rozliczeń Spółka Akcyjna', the company set up to operate the stranded cost settlement system.

Pursuant to the LTC Act, electricity producers who were parties to LTCs securing a specified revenue stream during the contract term had an option of voluntary termination of those contracts in exchange for payment of compensation for stranded costs arising from their termination, under a relevant compensation scheme. Under the LTC Act, 'stranded costs' are expenses incurred by an electricity producer which are not covered by revenues from sale of electricity, capacity reserves or system services on the competitive market after early termination of a long-term contract, and which result from investments in electricity generation assets made by the producer before May 1st 2004.

In the Group, Elektrociepłownia Nowa Sarzyna is a producer of electricity which receives funds to cover its stranded costs; it will participate in the compensation scheme until 2020.

The LTC Act specifies the maximum level of stranded costs for individual producers (PLN 777,535 thousand for Elektrociepłownia Nowa Sarzyna), as well as the maximum amount of expenses incurred by producers who use natural gas to generate electricity, resulting both from the use of collected gas and from uncollected gas (PLN 340,655 thousand for Elektrociepłownia Nowa Sarzyna).

### 9.3 Ownership of infrastructure for transmission or distribution of electricity

Under the general rule set forth in the Civil Code, any infrastructure permanently attached to land forms part of that land and, as such, is owned by the land owner. Art. 49 of the Civil Code provided for one exception to that rule, according to which (in the version effective before 2008), any facilities used to supply or collect water, steam, gas or electricity, and other similar infrastructure, did not form part of the property if they constituted the assets of an enterprise. Due to the ambiguity and differing interpretations of that provision, entrepreneurs occupied land without holding any legal title thereto, which led to disputes over the ownership of transmission infrastructure located on such properties. Under the 2008 amendment to the Civil Code, the above provision was slightly modified and, at the same time, a paragraph was added under which a person who bore the costs of construction of transmission infrastructure and remains its owner may demand that an entrepreneur who has connected that infrastructure to its own network acquire the ownership title thereto, for an appropriate consideration, unless agreed otherwise by the parties concerned. The demand to transfer the ownership of such infrastructure may also be made by the entrepreneur.

Despite expanding the rights of persons directly or indirectly involved in infrastructure development, the above provision still gives rise to certain ambiguities. On the one hand, it eliminates the general rule that any infrastructure permanently attached to land forms part of that land, but on the other hand it should not be interpreted as automatically entailing the transfer of ownership title to transmission infrastructure to the entrepreneur upon its connection to the entrepreneur's network. A direct agreement between the parties concerned is still required to settle that issue.

### 9.4 Transmission easement

The provisions on transmission easement were included in the Civil Code in August 2008, filling the legal vacuum connected with the lack of regulations that would govern the legal relations between transmission companies and owners of the properties on which transmission infrastructure is situated. The amendment offered the possibility of establishing transmission easements both for existing infrastructure and for planned investments, thus facilitating the planning of new energy projects.

Under the transmission easement regulations, a property may be encumbered for the benefit of an enterprise that has built (or intends to build) transmission infrastructure, including any structures and installations forming part of transmission lines used to supply and collect liquids, steam, gas or electricity, as well as other infrastructure used for similar purposes, in such a way that the enterprise may use the property within the specified scope, in accordance with the intended purpose of such infrastructure.

Transmission easement is established on the basis of an agreement, executed as a notary deed, between the enterprise and the owner of land on which transmission infrastructure is located, or is planned to be located. In a case where transmission easement is necessary for the use of transmission infrastructure but the owner of the property refuses to enter into the relevant agreement, the company may demand that the agreement be concluded against remuneration.

One downside of the transmission easement regime is the requirement to secure easements from the owners of all parcels of land crossed by a power line, which is frequently a considerable number of people.

## 9.5 Environmental protection

The Group's operations are extensively regulated under Polish environmental protection laws (including with respect to the protection of air, water, land surface, animals and plants, as well as protection against noise and electromagnetic fields). They transpose, in full or in part, a number of EU laws, including specifically: (i) Directive 2008/98/EC of the European Parliament and of the Council of November 19th 2008 on waste and repealing certain Directives (OJ EU L 312 of November 22nd 2008), (ii) Directive 2010/75/EU of the European Parliament and of the Council of November 24th 2010 on industrial emissions (integrated pollution prevention and control) (OJ EU L 334 of December 17th 2010), (iii) Directive 2004/35/EC of the European Parliament and of the Council of April 21st 2004 on environmental liability with regard to the prevention and remedying of environmental damage (OJ EU L 143 of April 30th 2004), (iv) Directive 85/337/EEC of the Council of June 27th 1985 on the assessment of the effects of certain public and private projects on the environment (OJ EU L 175 of July 5th 1985), (v) Directive 92/43/EEC of the Council of May 21st 1992 on the conservation of natural habitats and of wild fauna and flora (OJ EU L 206 of July 22nd 1992), (vi) Directive 79/409/EEC of the Council of April 2nd 1979 on the conservation of wild birds (OJ EU L 103 of April 25th 1979), (vii) Directive 2000/60/EC of the European Parliament and of the Council of October 23rd 2000 establishing a framework for Community action in the field of water policy (OJ EU L 327 of December 22nd 2000), (viii) Directive 2003/87/EC of the European Parliament and of the Council of October 13th 2003 establishing a scheme for greenhouse gas emission allowance trading within the Community and amending Council Directive 96/61/EC (OJ EU L 275 of October 25th 2003).

The individual national laws on environmental protection regulate the environmental issues both during the development process and the operation of a completed project. They form a framework for the protection of the environment as a whole and of its individual components (by defining environmental quality standards and methods for assessing their achievement, as well as measures designed to ensure that those standards are respected or restored), and specify the administrative procedures and requirements applicable in this area.

This section contains a summary of the key national laws and regulations on environmental protection which are relevant to the Group's operations.

### 9.5.1 Environmental Protection Law

The Environmental Protection Law is the main legal act regulating environmental issues. It sets forth the rules of environmental protection and the conditions for using environmental resources, including, in particular: (i) the principles of setting the conditions for release of certain substances or energy into the environment, (ii) the principles of determining costs related to the use of the environment, (iii) the duties of public authorities and environmental protection institutions, and (iv) liability for damaging or negative environmental impact, as well as sanctions imposed for non-compliance with the above rules.

The provisions of the Environmental Protection Law apply not only to completed projects (and their operation), but also to the implementation phase, i.e. the investment and construction process, which may have a negative impact on the environment. Already at the construction stage, the investor implementing a project is obliged to ensure compliance with all the environmental regulations in force in the area where the works are being carried out. Under the Environmental Protection Law, newly built

or modified installations cannot be placed in service unless and until they meet the applicable environmental requirements.

In the operating phase, the investor may be required to obtain sector-specific permits or an integrated permit specifying the emission limits for all substances or types of energy and the environmental impact conditions (required for installations whose operation – due to its nature or scale – may lead to significant pollution of the environment as a whole or of its individual components; in the power industry, an integrated permit is required for any combustion unit with a rated thermal input of over 50 MWt), and may be required to pay environmental charges (charges for using the natural environment). Pursuant to the Environmental Protection Law, a sector-specific environmental permit is required, as a rule, to operate an installation which: (i) releases gases or dust into the air, (ii) releases effluents into the ground or waters, (iii) generates waste, unless that installation is already covered by an integrated permit. In addition, in cases specified in the Environmental Protection Law, a user of the natural environment is required to pay environmental charges, at rates applying in the period in which the use of the environment took place. In accordance with the Environmental Protection Law and the Waste Act, a user of the natural environment is also required to maintain waste records, and if such user operates any installations containing more than 3 kg of SF6 gas, it is required to maintain relevant records for such installations and to have them serviced by companies certified to manage SF6.

The Environmental Protection Law also provides for civil, criminal and administrative liability for violation of its provisions or for non-compliance with any permits issued thereunder. For instance, where a given activity causes significant deterioration of the environment or poses a threat to human life or health, a decision is issued ordering that the activity be terminated to the extent necessary to prevent any further deterioration of the environment. The law also specifies situations where the operation of an installation may be optionally suspended (including in a case where the entity concerned releases any substances or energy into the environment without the required permit or does not comply with the conditions of such a permit). In addition, the Environmental Protection Law contains provisions on administrative fines imposed, among other things, for exceeding or breaching the conditions for the use of the environment, as well as on increased environmental charges, for example where the required permits have not been obtained.

### **9.5.2 Environmental Impact Assessment Act**

The Environmental Impact Assessment Act specifies, in particular: (i) the principles and procedures for the disclosure of information about the environment and its protection, (ii) the principles and procedures applying to environmental impact assessments, (iii) the rules of public participation in environmental protection, and (iv) the public authorities competent for the above areas. It also defines the procedure and rules for issuing decisions on environmental conditions (specifying the environmental conditions to be met by a project).

Under the Environmental Impact Assessment Act, a decision on environmental conditions is required to implement any projects which always have a significant environmental impact or which may potentially have a significant environmental impact. Such projects are specified in detail (in terms of their possible environmental impacts) in the Regulation of the Council of Ministers of November 9th 2010 on projects with significant environmental impact (Dz.U. of 2016, item 71). Typically, a decision on environmental conditions is obtained prior to other decisions, including the building permit, planning permit and water permit necessary to build any hydro-engineering structures or facilities.

Where a contemplated project may always have a significant environmental impact, an environmental impact assessment is performed in the course of the procedure related to the issuance of a decision on environmental conditions. Where a planned project may potentially have a significant environmental impact, an environmental impact assessment is performed if the competent authority decides that such an assessment is required. In addition, an assessment is required for projects other than those referred to above in relation to their impact on Natura 2000 sites (i.e. Special Protection Areas for birds, Special Areas of Conservation for habitats, or Sites of Community Importance established to protect the population of wild birds, natural habitats, or any species of Community importance) in a case where a contemplated project may have a significant impact on a Natura 2000 site but is not directly related to the protection of that site and does not result from its protection. An environmental impact assessment for a given project identifies, reviews and evaluates, among other things: (i) the direct and indirect impacts of the project on the environment and on human health and living conditions, (ii) the possibilities and methods of preventing and mitigating the negative environmental impacts of the project, and (iii) the required monitoring measures. An assessment of the impact of a given project on a Natura 2000 site identifies, reviews and evaluates the impact of the project on the Natura 2000 site.

In a decision on environmental conditions for a project, which is issued following the environmental impact assessment, the competent authority specifies, in particular: (i) the type and location of the project, (ii) the conditions for using the site during the implementation and operation/use phase, and (iii) in a case where the environmental impact assessment indicates the need to: a) provide environmental offsets (compensatory measures) – the competent authority states that such offsets are necessary, or b) prevent, mitigate and monitor the environmental impacts of the project – the competent authority imposes the obligation to take such measures. In addition, in a decision on environmental conditions the competent authority may oblige the applicant to submit a post-implementation report, specifying its scope and submission deadline. In a case where an environmental impact assessment has not been performed, a decision on environmental conditions will contain a statement of the competent authority to the effect that an environmental impact assessment is not required for the project.

### **9.5.3 Natura 2000 sites**

The Natura 2000 programme was established with a view to protecting the rich natural heritage of EU Member States (by protecting the most valuable and endangered habitats and species of plants and animals) and implementing a coherent policy for protection of natural resources within the EU. The key objective behind the programme is to create a network of protected areas in order to preserve certain types of natural habitats as well as animal and plant species considered to be of value and importance. Within the meaning of the Nature Conservation Act, the network of Natura 2000 sites includes: (i) Special Protection Areas for birds, (ii) Special Areas of Conservation for habitats, and (iii) Sites of Community Importance. These all belong to the European network of protected areas.

The legal regulations on Natura 2000 sites provide for a number of restrictions on the implementation of projects within or near Natura 2000 sites. As a rule, it is prohibited to pursue any activities which may have, individually or in combination with other activities, a significant negative impact on the protected natural resources within a Natura 2000 site, and particularly may: (i) cause the condition of natural habitats or habitats of animal and plant species protected within the designated Natura 2000 site to deteriorate, (ii) adversely affect the species protected within the designated Natura 2000 site, or (iii) adversely affect the integrity of the Natura 2000 site or its links to other areas. However, it should also be noted that the designation of an area as a Natura 2000 site does not preclude the use of that area or its surroundings for economic purposes. Subject to certain conditions (including the performance of an assessment of the impact of a contemplated project on Natura 2000 sites and obtaining the necessary permits), investment projects may be located within such areas.

### **9.5.4 Act on Prevention of Environmental Damage**

The Act on Prevention of Environmental Damage specifies the scope of responsibility for preventing and remedying environmental damage. The provisions of the Act apply to the direct threat of environmental damage or to actual environmental damage (caused by activities which pose a risk of environmental damage, or by other activities if they concern protected species or protected natural habitats and are caused by the user of the natural environment). The provisions of the Act do not apply, *inter alia*, in cases where more than 30 years have passed since the emission or event which caused a direct threat of environmental damage or actual environmental damage.

The Act imposes the following obligations on a user of the natural environment: (i) the obligation to take preventive measures in the event of a direct threat of environmental damage, (ii) the obligation to take remedial action or measures aimed at mitigating the effects of environmental damage and at preventing any subsequent environmental damage and any adverse impacts on human health, or any further deterioration of the functioning of the affected components of the environment, where the environmental damage has already occurred, (iii) the obligation to notify the environmental protection authority of any direct threat of environmental damage or of actual occurrence of environmental damage, as well as of the completion of preventive or remedial measures, and (iv) the obligation to consult and agree the conditions for carrying out remedial measures with the environmental protection authority.

In line with the overriding rule of the environmental policy – namely the ‘polluter pays’ principle, any costs of preventive or remedial measures are paid by the user of the environment.

### **9.5.5 Nature Conservation Act**

The Nature Conservation Act defines the objectives, rules and forms of protection of animate and inanimate nature as well as landscape (including Natura 2000 sites). It also defines the measures

taken to protect nature, the authorities competent for and services dedicated to its protection, as well as the rules governing the management of its components and resources.

#### **9.5.6 Water Law**

The Water Law sets forth the principles of water management, development and protection of water resources, as well as water consumption and management of water resources. Moreover, the Water Law regulates issues related to ownership rights to waters and water-covered land. The Water Law provides for some legal instruments designed to facilitate the management of water resources, the most important of these being water permits. Water permits are required for: (i) any special use of waters, (ii) regulation of water courses, (iii) construction of hydraulic engineering structures, as well as (iv) discharge of wastewater into waters or the ground. A water permit defines the purpose and scope of the use of waters, the terms of exercising the awarded rights, and the obligations which must be fulfilled to protect environmental resources and safeguard the interests of the local community and the economy.

#### **9.5.7 Waste Act**

The key piece of legislation governing the management of waste is the Waste Act. The Waste Act defines a range of measures designed to protect the environment, human life and health, measures intended to prevent or mitigate the negative impact of waste generation and management on the environment and human health, as well as measures aimed at containing the overall effect of consumption of resources and improving the efficiency of their use.

As far as the ways of handling waste are concerned, the Waste Act imposes a certain hierarchy of actions. First, waste generation should be prevented and the quantity of generated waste and its negative impact on human life and health and on the natural environment should be limited. Waste whose generation cannot be prevented should be recycled, while waste which cannot be recycled should be disposed of. Waste should be managed in compliance with the 'proximity principle'. In line with the 'proximity principle', waste should first be processed at the place where it was generated. Any waste which cannot be processed at the place where it was generated should be transferred to the closest location where it can be processed, with due regard given to the waste management hierarchy and with the application of the best available technique or technology.

Furthermore, the Waste Act describes the waste management duties of waste owners (including waste generators), as well as public administration bodies. Pursuant to the Act, any waste generator has the duty to manage the waste it generates. The waste generator or another waste owner may engage another entity (meeting specific requirements) to perform its waste management duties. By the Act of December 14th 2012, the requirement to obtain a permit for waste generation (for generation of waste (i) with a weight of over 1 Mg per year – in the case of hazardous waste, or (ii) with a weight of over 5,000 Mg per year – in the case of non-hazardous waste) has been transferred to the Environmental Protection Law, and this permit has become a sectoral permit (unless an integrated permit has been issued for the installation). As a rule, a permit is also required to conduct operations involving waste collection and processing.

A catalogue of waste along with a list of hazardous waste and the manner of classifying waste is defined in the Regulation of the Minister of Environment on the catalogue of waste, dated December 9th 2014 (Dz.U. item 1923).

#### **9.5.8 Act on Protection of Agricultural and Forest Land**

The Act on Protection of Agricultural and Forest Land defines the rules governing the protection of agricultural and forest land and reclamation of such land, as well as the rules for improving such land's value in use. The Act also defines the manner in which the designation of some agricultural and forest land may be changed into non-agricultural or non-forest land, as well as the manner of excluding land allocated for non-agricultural and non-forest purposes from agricultural or forest production.

#### **9.5.9 CO<sub>2</sub> emissions**

Many industrial installations, especially power sector installations, emit pollutants (such as greenhouse gases), leading to irreversible changes in the natural environment (including climate changes). The main instrument of the EU's policy in the area of climate protection designed to reduce emissions of greenhouse gases into the air is the European Union Emissions Trading Scheme.

Poland's national regulations with respect to emissions of greenhouse gases, implementing the relevant EU regulations, are set out primarily in: (i) the Act on Greenhouse Gas Emission Allowances

Trading, dated June 12th 2015 (Dz.U. of 2017, item 568, as amended) and (ii) the Act on the System of Managing Emissions of Greenhouse Gases and Other Substances, dated July 17th 2009 (Dz.U. of 2017, item 286, as amended).

These two Acts define, in particular: (i) the rules governing the management of emissions of greenhouse gases and other substances, (ii) the rules governing the operation of the greenhouse gas emissions trading scheme (the “scheme”), (iii) the list of greenhouse gases and other substances released into the air which are covered by the management system, (iv) the types of installations covered by the system or the types of activities conducted in the installations covered by the system in the trading period starting January 1st 2013, as well as the threshold values referring to the installations’ production capacities or activities, and greenhouse gases assigned to a given installation or activity.

Generally, the scheme covers emissions of greenhouse gases from those installations whose operations involve emission of such gases and which meet the threshold values established by reference to production capacities. With respect to carbon dioxide emissions, such installations include fuel combustion installations, other than those burning hazardous or municipal waste, with a rated thermal input in excess of 20 MWt (e.g. power plants or CHP plants). In order to be able to release a given quantity of carbon dioxide into the air, entities operating such installations must hold an appropriate number of emission allowances (corresponding to their actual CO<sub>2</sub> emission volumes). Allowances may be either obtained through free allocation or purchased. In the current trading period (2013-2020), in the case of installations for electricity production, the proportion of allowances purchased relative to those obtained free of charge is generally assumed to increase every year, so that in 2020 all emission allowances are purchased. In the third trading period (2013–2020), auctioning is assumed to be the key method of allocating emission allowances for installations generating electricity.

With respect to the free allocation of allowances, by way of its decision of January 22nd 2014, the European Commission conditionally accepted Poland’s application for transitional allocation of free carbon dioxide emission allowances as part of the scheme for the power sector (installations for electricity production) for 2013–2020.

## 9.6 Act on Wind Farm Projects

On July 15th 2016, the Act on Wind Farm Projects came into force.

Under the Act, the distance between a wind farm and residential buildings or a nature conservation area may not be shorter than ten times the height of the wind power plant, from the ground surface to its highest point (including the rotor and blades),

except for projects with respect to which, as at the date of the Act’s entry into force, a building permit had been issued or building permit procedure had been initiated.

Additionally, under the Act, a new wind farm may only be constructed pursuant to such permit within three years of the Act’s entry into force, in which period an operation permit must be secured.

Considering the above provisions of the Act, the Company was unable to continue the development of a number of wind farm projects and had to recognise impairment losses in 2016. Furthermore, the said provisions may impede the implementation (construction) of other wind farm projects.

Given the very unclear wording of the Act, uncertainty arose as to the calculation of wind farm property tax. To resolve the uncertainty, the Group companies requested that the competent authorities (i.e. municipal authorities) issue interpretations concerning calculation of the property tax applicable from 2017, pointing to the necessity to calculate property tax in accordance with previously applicable rules. By the date of this report, the Group received one positive and seven negative responses to these requests (two of which relate to the same project).

According to the negative interpretations, as of 2017 the property tax on wind farms should be calculated based on new rules. In the Company’s opinion, the legal rationale for the negative interpretations was flawed, based on which the Company filed appeals against them to Provincial Administrative Courts. By the date of this report, four rulings (concerning three projects) had been issued, dismissing the appeals filed by the individual Group member companies, while three appeals were still pending consideration. The Company plans to lodge cassation appeals concerning those

Provincial Administrative Court rulings which are unfavourable to the Group, after receiving the statements of reasons for the rulings.

At the same time, as part of concurrent procedures, two projects received a positive interpretation allowing the Group to use the current market value of a wind farm as the tax base, and four projects – a negative interpretation. With regard to the negative interpretations, the Company believes that there is basis for appealing against them to the Provincial Administrative Courts because of the erroneous – in the Company’s opinion – statements of reasons, and appropriate appeals will be filed.

Considering the rulings issued by the Provincial Administrative Courts to date, the Company estimates that should the most pessimistic scenario materialize for all the remaining (four) projects which did not receive any positive interpretation, the Group’s operating expenses in 2017 would increase by about PLN 16m, though no final estimate can be given until late in 2017 or early in 2018 after all rulings from the Provincial Administrative Courts are obtained.
